## Cortina Leathers introduces **Linden**: Tailored for Living

Cortina Leathers proudly announces the launch of **Linden**, a luxury pure-aniline leather collection crafted in Germany from extra-large, hand-selected South German hides and offered in **33 colors tailored for elevated residential interiors**.

Disciplined yet warm, refined yet never rigid, Linden reflects a distinctly German point of view grounded in quality, restraint, and lasting beauty. Designed with luxury residential projects in mind, Linden also lends itself beautifully to boutique hospitality and executive commercial environments.

The extensive color palette is rare for pure-aniline collections of this quality and gives designers room to work across traditional, transitional, contemporary, and modern interiors—from quiet tonal compositions to richer, more expressive upholstery statements.

Linden retains the authentic beauty of the hide with subtle tonal shifts, natural markings, and variations in texture that make each hide unique. Its surface has a soft, understated sheen, and with time and use it will evolve with the kind of patina that makes furniture feel even more personal and layered.

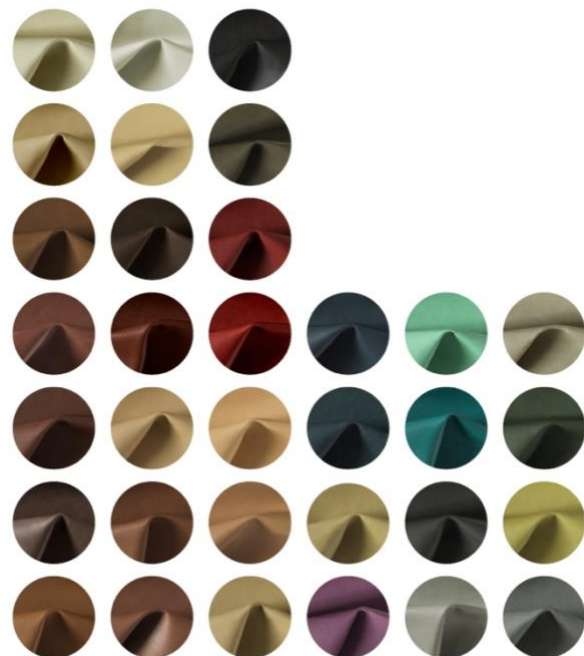

*"Linden was developed for designers seeking the authenticity, softness, and natural beauty that only the finest pure-aniline leather can provide," said Jack Prause, President of Cortina Leathers. "We were inspired to bring Linden into our collection library by high-style European city interiors where we see naked aniline leathers preferred as designers tastefully mix modern elements with historic details. Linden's refined aesthetic and exceptionally soft hand make it particularly well suited for today's sophisticated interiors."*

Soft, elegant, and beautifully authentic, Linden is designed for interiors where materiality shapes the experience.
